DESCRIPTION

The Fyrite® InTech® is the perfect tool for entry-level and residential technicians who need to ensure safe operating conditions and determine combustion efficiency. The InTech® features 6 fuels in the North American configuration to suit a wide variety of applications.

The InTech® includes sensors for O₂ and CO, with an option for an external NO_x filter. The CO sensor can be replaced in the field without down time using B-Smart® pre-calibrated sensors. The InTech® calculates values like efficiency, CO₂ and CO air-free to help monitor combustion processes effectively and accurately.

The Fyrite® InTech® has been self-certified to comply with AHRI 1260.

*Note: The Fyrite® INSIGHT® Plus calculates CO₂ value based upon other measured values during the combustion process. It does not measure CO₂ directly.
