

Non-contact Line-laser Sensor SurfaceMeasure1008S

Line-laser sensor providing stable measurements with simple operations

System configuration (example)

This is an example of the system configuration of SurfaceMeasure1008S. Various other system configurations are also available.

* PLC protocol: Modbus TCP, EtherNet/IP, PROFINET

Product structure

This line-laser sensor combines the optical technology and sensor technology of Mitutoyo.

Three product features

— (1) High-accuracy and environment-resistant sensor

The sensor itself is guaranteed for an accuracy of 20 μm and a Z repeatability of 0.5 μm . It has also achieved the IP67 protection level, providing stable measurements.

— (2) Supporting automated measurement

The **SurfaceMeasure1008S** can obtain the profiles and three-dimensional shapes of measurement workpieces at high speed (a maximum frame rate of 10 kHz) and make an automatic judgement inside the sensor. It is also equipped with a parts matching function that allows the measurement tool to be applied throughout, regardless of the orientations of the parts being measured. Measurements can be taken without performing alignment.

— (3) Simple operability

The software supports intuitive operation and is built into the sensor (software installation is not required), so you can use it immediately after mounting.
