# Turbine meters

Turbine meters are best suited for low viscosity fluids and also gases.

## Measuring principle

Turbine meters are indirect volumetric meters. When the fluid passes through, a rotor is activated and the movement is then either electronically or mechanically transmitted.

# Blancett® turbine meters

- Petrochemical
- Oil and Gas
- Food and Beverage
- Semiconductor
- Irrigation
- Chemical
- Industrial
- Refining

## Rugged meters for harsh environments, high corrosive media or for food and pharmaceutical industry - accurate and reliable

Badger Meter offers the Blancett® family of turbine flow meters to measure everything from water in hydraulic fracturing and mining operations, to gases and liquids from wellheads to sanitary environments. Our turbine meters deliver accurate and reliable flow measurements for both liquid and gas applications. Blancett® turbine meters are also cost-effective and easy to repair. Both complete meters and repair kits receive a five-point NIST traceable calibration at the factory. Additional calibrations are available to achieve a higher accuracy rating or

to custom-calibrated for a specific viscosity. The B1500 meters receive a 10-point NIST traceable calibration. To satisfy your flow metering needs, Badger Meter provides a full line of cost effective flow monitors to fit a variety of application demands including hazardous area locations, pulse and network communications and a variety of mounting options. The flow monitors are designed to be used with Blancett® flow meters, but can also be used with almost any flow meter producing a low amplitude AC output. The Blancett® family is offered with an assortment

of accessories that deliver output signals to suit the inputs required by data acquisition or control systems. Available accessories include turbine meter pickups, K-factor scaler, frequency-to-analog transmitters, frequency-to-square wave transmitters and displays.

| Description              | The Blancett® K-factor scaler converts the output of a Blancett® turbine flow meter, or other low-level frequency output, into a scaled square wave output signal which then translates into the desired units of measure.                                                                                                                             | The active sensor is designed for use with turbine meters, the sensor measures and calculates the flow rate to produce an analog current or voltage output representative of the meter's flow rate. <ul style="list-style-type: none"><li>Converts turbine pulse output into linearized analog output</li><li>Choice of 4 to 20 mA or 0 to 5V DC</li></ul> |                                                        |                                                                                                                                    |                                                        |

<sup>1</sup> Includes magnetic pickup.

# Blancett® model 1100

- Broad flow range and mechanical process connections
- Wide variety
- Simple installation

Illustration of electrical signal generated by rotor movement

## Blancett® 1100 standard turbine flow meters

Model 1100 turbine flow meter withstands the demands of the most rigorous flow measurement applications. Designed to maintain accuracy and mechanical integrity, its rugged 316 stainless steel construction ensures a long service life in severe operating environments.

It meets a wide range of measurement requirements and integrates electronically with the Blancett® flow monitors, K-factor scaler or the F to I/F to V intelligent converters.

Originally developed for the secondary oil recovery market, the model 1100 is an ideal

meter for nearly all liquid flow measurement on or off the oilfield. All meters will be provided with a 5-point calibration certificate, standard calibrated with water (1.0 S.G.) or optionally with oil (0.876 S.G.)

## Specifications

## Configuration examples

The Blancett® family is offered with an assortment of accessories that deliver output signals to suit the inputs required by data acquisition or control systems. Available accessories include monitors, turbine meter pickups, frequency-to-analog transmitters and frequency-to-square wave transmitters.

### Monitor

| Mounting                            | Hub size     | Turbine with magnetic pickup <sup>1</sup> | Bushing reducer    | Cable <sup>2</sup>   | Monitor <sup>3</sup> |
|-------------------------------------|--------------|-------------------------------------------|--------------------|----------------------|----------------------|
| Meter mounted display               | ½" NPT       | B110-375-½                                | B220056 or B220057 | -                    | B30AM-CS             |
| Meter mounted display               | 1" NPT       | B111-110                                  | not required       | -                    | B30AM-CS             |
| Remote mounted display (with cable) | not required | B111-110                                  | not required       | B220-220 or B220-221 | B30AR-CS             |

<sup>1</sup> Turbine with magnetic pickup: see "Table 1" on page 8

<sup>2</sup> Cable: see "Table 52" on page 55

<sup>3</sup> Monitor: see "Table 45" on page 49

### K-factor scaler

| Mounting      | Hub size | Turbine with magnetic pickup <sup>1</sup> | Bushing reducer    | K-factor scaler <sup>2</sup> | Programming software <sup>3</sup> |
|---------------|----------|-------------------------------------------|--------------------|------------------------------|-----------------------------------|
| Meter mounted | ½" NPT   | B110-375-½                                | B220056 or B220057 | B220-885                     | B220-900                          |
| Meter mounted | 1" NPT   | B111-110                                  | not required       | B220-885                     | B220-900                          |

<sup>1</sup> Turbine with magnetic pickup: see "Table 1" on page 8

<sup>2</sup> K-factor scaler: see "Table 48" on page 52

<sup>3</sup> Software: see "Table 48" on page 52

### F to I intelligent converter

| Mounting      | Hub size | Turbine with magnetic pickup <sup>1</sup> | Bushing reducer    | F to I intelligent converter <sup>2</sup> | Programming kit <sup>3</sup> |
|---------------|----------|-------------------------------------------|--------------------|-------------------------------------------|------------------------------|
| Meter mounted | ½" NPT   | B110-375-½                                | B220056 or B220057 | B220-873                                  | B220-954                     |
| Meter mounted | 1" NPT   | B111-110                                  | not required       | B220-873                                  | B220-954                     |

<sup>1</sup> Turbine with magnetic pickup: see "Table 1" on page 8

<sup>2</sup> F to I converter: see "Table 49" on page 54

<sup>3</sup> Programming kit: see "Table 49" on page 54

### F to V intelligent converter

| Mounting      | Hub size | Turbine with magnetic pickup <sup>1</sup> | Bushing reducer    | F to V intelligent converter <sup>2</sup> | Programming kit <sup>3</sup> |
|---------------|----------|-------------------------------------------|--------------------|-------------------------------------------|------------------------------|
| Meter mounted | ½" NPT   | B110-375-½                                | B220056 or B220057 | B220-874                                  | B220-954                     |
| Meter mounted | 1" NPT   | B111-110                                  | not required       | B220-874                                  | B220-954                     |

<sup>1</sup> Turbine with magnetic pickup: see "Table 1" on page 8

<sup>2</sup> F to V converter: see "Table 49" on page 54

<sup>3</sup> Programming kit: see "Table 49" on page 54

## Blancett® 1100 standard flow meters without magnetic pickup

| Part number <sup>1</sup> | Meter size | Hub size   | End connection   | Maximum pressure      | Flow rate           |              | K-factor <sup>2</sup> |              |     |
|--------------------------|------------|------------|------------------|-----------------------|---------------------|--------------|-----------------------|--------------|-----|
|                          |            |            |                  |                       | gal/min             | l/min        | pulses/gal            | pulses/liter |     |
| B112-375-½               | 3/8"       | ½" NPT     | ½" × ½" male NPT | 345 bar<br>(5000 psi) | 0,6 - 3             | 2,3 - 11,4   | 18000                 | 4749         |     |
| B112-500-½               | ½"         |            |                  |                       | 0,75 - 7,5          | 2,8 - 28,4   | 13000                 | 3430         |     |
| B112-750-½               | ¾"         |            |                  |                       | 2 - 15              | 7,6 - 56,8   | 3300                  | 870          |     |

<sup>3</sup> Monitor: see "Table 45" on page 49; Approvals see page 48

I.S. barrier not available

### Wiring example for B111126

#### Notes:

- For CSA-NRTL installations: Installation should be in accordance with ANSI/ISA RP12.6 "Installation of intrinsically safe systems for hazardous locations" and the national electric code (ANSI/NFPA 70).
- For CSA installations: Install in accordance with Canadian electrical code Part I.
- Pickup coils equipped with the „MS“ Type connector are only suitable for hazardous locations class I, division I, groups A, B, C, D, Class II, division I, Group G, Class III and coal dust Pickup coils equipped with a „NPT“ connector or „pigtail“ leads, can be used in hazardous locations class I, division I, groups A, B, C, D, class II, division I, Groups E, F, G, Class III.
- For entity installations, select a CSA certified barrier that satisfies the following:
 
$$V_{max} \geq V_{oc} \quad C_i + C_{cable} \leq C_a$$

$$I_{max} \geq I_{sc} \quad L_i + L_{cable} \leq L_a$$
- For system installations, use a CSA certified single channel barrier having the parameters of 28 VDC (max), and 300 ohms (min).
- Barriers must be installed in accordance with manufactures instructions.
- Exia is defined as intrinsically safe/secured intrinsèque.

## Blancett® 1100 standard flow meters – 304 SS flange connections with B111109 magnetic pickup

Refer to the chart on the left to select the part number for a model 1100 with flange connections. As an alternative to the model 1100 flanged meters, consider the QuikSert® models.

### Specifications

<sup>1</sup> Includes standard magnetic pickup. n/a B1111109. -101 to +165 °C (-150 to +330 °F). Suitable for all mounting styles.

Tabela 7

## Blancett® 1100 explosion proof flow meters – 304 SS flange connections without magnetic pickup

Refer to the chart on the left to select the part number for a model 1100 with flange connections. As an alternative to the model 1100 flanged meters, consider the QuikSert® models.

### Model 1100 explosion proof pickup options

| Part number | Magnetic pickup                                                                                             | Temperature range                      |
|-------------|-------------------------------------------------------------------------------------------------------------|----------------------------------------|
| B111109     | Standard                                                                                                    | -101 °C to +165 °C (-150 °F to 330 °F) |
| B111126     | ATEX  II 1G; EEx ia IIC T5 | -50 °C to +120 °C (-58 °F to 248 °F)   |
| B220243     | Intrinsically safe, FM rated                                                                                | -101 °C to +165 °C (-150 °F to 330 °F) |

## Blancett® 1200 turbine flow meter

The model 1200 turbine flow meter has been designed for high corrosive environments. Developed for use in petrochemical and process

industries with liquid chemical flows, the model 1200 turbine provides accuracy and durability in aggressive industrial environments.

## Specifications

# Blancett® model 1500

Blancett® 1500  
with meter mounted  
B3000 display

- Extraordinary linearity
- High measuring accuracy
- Available in sizes from 1/4" to 2"
- Available with 10 point calibration certificate

Illustration of electrical signal generated by rotor movement

## Blancett® turbine meter model 1500

Blancett® 1500 flow meters are the ideal solutions for standard clean, filtered liquid flow applications in precision industrial processes, found in the automotive, chemical/petrochemical, aerospace and general industries.

Turbine flow meters 1500 have exceptional mechanical linearity, resulting in minimizing

or negating temperature induced viscosity influence. Meters come with national pipe thread (NPT) or flange process fittings, sizes up to two inches and can be ordered with a Blancett® B3000 flow monitor to accommodate the requirements of most applications and flow ranges.

## Specifications

|                           |               |                                                            |
|---------------------------|---------------|------------------------------------------------------------|
| Materials of construction | Body          | 316 stainless steel                                        |
|                           | Shafts        | 316 stainless steel                                        |
|                           | Rotors        | 17-4 PH stainless steel                                    |
|                           | Bearing       | Ceramic ball bearings                                      |
| Operating parameters      | Meter         | -101 °C up to +149 °C (-150 °F up to +300 °F)              |
|                           | Pickup        | -101 °C up to +149 °C (-150 °F up to +300 °F) / B111113    |
|                           | Pressure      | max. 408 bar                                               |

<sup>1</sup> Includes standard magnetic pickup part number B111113.

<sup>2</sup> K-factor will vary meter to meter. Refer to the calibration test report.

Table 15

### NPT meter pressure rating

1. Pressure ratings are for temperatures up to 37.8 °C (100 °F).
2. Pressure rating is calculated with an allowable stress value of 1379 bar (20,000 psi) for 316 SS per pressure piping code ASME B31.3
3. Pressure chart is displaying safe working pressure, in accordance with power piping code ASME B31.1

### Flange meter pressure rating

1. Specifications from maximum non-shock allowable working pressure in PSIG at 37.8 °C (100 °F) or less.
2. Stainless steel 316A-181 material.
3. Pressure rating in accordance with ASME B16.5 standards.

# Blancett® QuikSert® turbine flow meters

## – Liquids

- No need for mating flanges
- CSA explosion proof models available
- NIST traceable calibration
- Easy installation
- Lower maintenance costs

### Turbine meters for harsh applications

The QuikSert® turbine flow meter's durable stainless steel body incorporates a helical turbine with tungsten carbide shaft and bearings. The meter provides an efficient, long service life and a cost effective solution for your measurement requirements. The QuikSert's compact design requires less space in the flow line, allowing

easy installation and lower mechanical costs. The QuikSert® utilizes modified upstream and downstream flow straighteners for enhanced fluid dynamics. QuikSert® provides a local flow rate and volume totalization when used with a Blancett® monitor.

| B136-560                 | 6" × 6"          | 10                    | 0,69 | 200 - 2,50  | 757- 9463,5    | 3,5                   | 0,9          |
| B138-580                 | 8" × 8"          | 10                    | 0,69 | 350 - 3,500 | 1324,9 - 13249 | 1,5                   | 0,4          |

<sup>1</sup> Includes standard magnetic pickup, p/n B111109, -101 to +165 °C (-150 to +330 °F), suitable for all mounting styles.

<sup>2</sup> All K-factors are approximate.

NOTE: Accuracy of these meters is ±4% of rate - for cement slurries and other applications with similar levels of particulate.

Table 19

# Blancett® QuikSert® turbine flow meters – Gas

## Suitable for:

- Flare gas
- Natural gas
- Methane
- Biogas
- Compressed gas
- Nitrogen

## Blancett® QuikSert® Gas

The Gas QuikSert® turbine flow meter provides long service life by offering a durable construction design composed of stainless steel and tungsten carbide shaft and bearings. The unique wafer style design allows for quick installation and easily fits between two ANSI flanges. Light weight, balanced rotor provides

an instantaneous response to changes in flow. Gas QuikSert® is compatible with all Blancett® flow monitors, K-factor scaler and intelligent converters.

# FloClean 3-A sanitary turbine meters

- 3A sanitary standard
- Sanitary end connection
- Materials comply to FDA requirements

## FloClean with 3-A sanitary standard approval

The FloClean 3-A sanitary turbine flow meter meets 3-A sanitary standards. The meter is perfectly adapted for use in the food, beverage and pharmaceutical industries.

Combined with a Blancett® monitor, the meter provides actual flow rate and total flow rate.

Illustration of electric signal generated by rotor movement

## Specifications

|                           |                                                        |                                            |
|---------------------------|--------------------------------------------------------|--------------------------------------------|
| Materials of construction | Body and internal wetted parts                         | 316L stainless steel                       |

# Blancett® model 1750 – Positive displacement gear flow meters

- No need for additional straight run piping
- Designed for fluids with a wide range of viscosities, as well as low flow rates
- Available in high strength aluminum or stainless steel housing
- Applications: paint, grease, hydraulics, solvents, fuels

Operating principle

## Positive displacement gear flow meters

Because turbine meters are not suitable for every liquid application, Badger Meter also offers other metering technologies. Two types of adjacent liquid metering applications often associated with common turbine-metering applications are measurement of higher-viscosity liquids and

liquids containing small particulates. Positive displacement and impeller meter technologies are appropriate for these applications. The B1750 is a bi-directional flow meter when using appropriate electronics.

## Specifications

# Flow monitors

## B2800 / B2900 / B3000 / E110 flow monitors for the Blancett® series

The flow monitors complement the Blancett® turbine meters.  
They offer various mounting possibilities for flexible meter reading on site.

| Type                   | B2800                                                                                                                                                                                                                                                                                                                                                                                         | B2900                                                                                                                                                                                       | B3000                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | E110                                                                                                                                                                                                                                                                                                                              |

<sup>1</sup> Bushing reducer required for ½" hub turbine meters to mount accessories on meter (see "Table 58" on page 56)

# Blancett® flow monitor B2800

Blancett® B2800  
flow monitor  
meter mount

Model B2800 is a technologically advanced flow monitor designed to be comprehensive, user-friendly, flexible and cost efficient. The digital signal processing display comes precalibrated by the factory when purchased with a Blancett® turbine flow meter; otherwise, it can easily be

configured in the field. The B2800 can be utilized with nearly any flow sensor that outputs a low-amplitude AC signal.

- Displays rate and/or total on a large 8-digit by  $\frac{3}{4}$ " display
- User-friendly front panel programming
- Six mounting options available: meter, remote, swivel, handheld, panel or explosion proof
- Simplified model displays in five selectable units of measure
- CSA Class I, Div 1 approval

## Specifications

Table 42

# Blancett® flow monitor B2900

Blancett® B2900  
flow monitor  
meter mount

The B2900 monitor uses the frequency information to calculate flow rate and total flow. Through the use of the programming buttons, you can select rate units, total units and unit time intervals among other functions. If required, the monitor can easily be re-configured in the field. Finally, you can choose between simultaneously showing rate and total, or alternating

between rate and grand total. The monitor provides advanced communication capabilities over an RS485 bus using Modbus RTU and control outputs. The B2900 can be utilized with nearly any flow sensor that outputs a low-amplitude AC signal or contact closure signal.

- Advanced connectivity options allow you to connect meters to your network for remote monitoring and process automation capabilities.
- Updated display and totalization options provide more flow information, including simultaneous display of rate and total as well as standard, batch and grand totals.

## Specifications

B2900 flow monitor, loop powered/4-20 mA and battery powered

| Part number | Model    | Power Source     | Mounting style            |
|-------------|----------|------------------|---------------------------|
| B29AM-CS    | Advanced | Battery and loop | Meter mount               |
| B29AR-CS    |          |                  | Remote mount (less cable) |
| B29AS-CS    |          |                  | Swivel mount              |

NOTE: "Advanced" models are loop-powered with 4/20mA and pulse outputs and include battery back-up power supply.  
NOTE: "Advanced" units include 2 adjustable flow rate alarm and ModBus® RTU digital communications over RS485.

Table 44

# Blancett® flow monitor B3000

Blancett® B3000  
flow monitor  
swivel mount

This rugged flow monitor is ideal for harsh industrial applications. Stainless steel and tungsten carbide components ensure long life. These products are also well-suited for industrial applications with high temperature and high

pressure applications, for example in secondary oil recovery, semiconductor and chemical processing. Electronic options enable the meter to interface with most computers and PLCs.

- Advanced connectivity options allow you to connect meters to your network for remote monitoring and process automation capabilities.
- Updated display and totalization options provide more flow information, including simultaneous display of rate and total as well as standard, batch and grand totals.

Table 45

## Explosion proof kit (hazardous location)

| Part number | Description                                             |
|-------------|---------------------------------------------------------|
| B280-737    | For 1" NPT Hub for remote mount display B30X or B2800XP |
| B280-742    | For ½" NPT Hub for remote mount display B30X or B2800XP |

Table 46

Blancett® B3000 explosion proof flow monitor, explosion proof kit and 1100 series flow meter

E110 flow monitor, loop powered, 4-20 mA output, explosion proof, meter mount

The E110 monitor is a popular model in our range of explosion proof flow rate indicators. The monitor distinguishes itself by its quality and functionality driven European design and manufacturing.

E110 explosion proof flow monitor for meter mount

| PD   | Power requirement         | 9-27 V DC with sensor supply                                     |
| XD   | Hazardous area            | Explosion proof according to ATEX, IECEx, FM and CSA c-us        |
| ZB   | Backlight                 | Included                                                         |

## Accessories

- Square-wave output proportional to any desired unit of measure
- Amplifies turbine meter output
- Windows®-based configuration software

### K-factor scalars

The Blancett® K-factor scalar converts a low level frequency output (such as that from a Blancett® turbine flow meter) into a scaled square wave digital output signal. This adjustable frequency divider converts or scales the turbine

meter output into units of measurement needed for a particular application and recognized by almost any data collection device. The k-factor scalar provides an amplified signal, even when a frequency conversion is not required. The signal

is more immune to electrical noise and capable of transmission over longer distances than a raw turbine meter output.

### Specifications

### K-factor scaler B220-885

**Conduit elbow style**  
Model B220-873 & B220-874

**Canister style**  
Model B220-950 & B220-951

- 4–20 mA (2-wire) or 0–5V DC (3-wire) output
- Analog signal proportional to flow rate
- Windows®-based configuration software

## Frequency converter

These microprocessor-based devices are engineered to provide an analog output directly from a Blancett® turbine flow meter. The converters measure and calculate the flow rate of a turbine flow meter and produce an analog output proportional to the flow rate.

The F to I and F to V converters with two different mounting styles are offered with either a 4–20 mA or a 0–5V DC output signal, enabling easy electronic integration.

Choose between the capped aluminum conduit elbow style (model B220-873 or B220-874) or the canister style (model B220-950 or B220-951).

Table 50

## Magnetic pickups

The Blancett® pickup is a magnetic pickup used with turbine flow meters to sense movement of the rotor blade within the flow meter body. The pickup is available in two connections: a two-pin connection, or a three-pin sealed stainless steel

face connection for sanitary applications. The contents of the pickup are sealed in a rugged stainless steel housing that can be used with a variety of threaded turbine flow meters.

| Part number | Description                                                                               |
|-------------|-------------------------------------------------------------------------------------------|
| B110125     | Jam nut for all magnetic pickups (except B111117, B140013 and B120101)                    |
| B111109     | Standard magnetic pickup -101 °C to +165 °C (-150 °F to +330 °F)                          |
| B111112     | T2 magnetic pickup, 12" leads +107 °C (+225 °F)                                           |
| B111113     | Gas QuikSert® magnetic pickup -101 °C to +149 °C (-150 °F to +300 °F)                     |
| B111117     | Standard RF pickup -101 °C to +165 °C (-150 °F to +330 °F) for 1200, CorrExx™ series only |
| B111126     | Magnetic pickup, ATEX approved (European hazardous area)                                  |
| B111127     | Magnetic pickup, length 3", -101 °C to +165 °C (-150 °F to +330 °F)                       |
| B111128     | Magnetic pickup, length 4", -101 °C to +165 °C (-150 °F to +330 °F)                       |
| B120101     | Magnetic pickup, all stainless steel, long nose for 1200, CorrExx™ series only            |
| B140013     | Shielded magnetic pickup, stainless steel for 1200, CorrExx™ series only                  |
| B161109     | NEMA 6 magnetic pickup -101 °C to +165 °C (-150 °F to +330 °F)                            |
| B161210     | NEMA 6 magnetic pickup with preamplifier -29 °C to +71 °C (-20 °F to +160 °F)             |
| B161211     | Magnetic pickup, open collector-open emitter                                              |
| B161212     | NEMA 6 magnetic pickup with preamplifier (less Zener)                                     |
| B220111     | High temp magnetic pickup -101 °C to +232 °C (-150 °F to +450 °F)                         |
| B220210     | Magnetic pickup with preamplifier -29 °C to +71 °C (-20 °F to +160 °F)                    |

## Cable and connector options

Used with magnetic pickups **B111109, B111113, B111117, B111127, B111128, B120101, B140013 and B220243**

| Part number  | Description                                                                                                               |
|--------------|---------------------------------------------------------------------------------------------------------------------------|
| B220-220     | Cable assembly; 3 m with 2 pin 90 °Connector                                                                              |
| B220-221     | Cable assembly; 3 m with 2 pin straight connector                                                                         |
| B220-221-X   | Cable assembly; 3 m with 2 pin straight connector & stripped leads                                                        |
| B220-221-XLC | Cable assembly; 3 m with 2 pin straight connector, hub protector, & stripped leads                                        |
| B220-218     | Cable assembly; 3 m with 2 pin straight connector and hub protector                                                       |
| B222-124     | Connector assembly; 2 pin Amphenol, 90°                                                                                   |
| B222-126     | Connector assembly; 2 pin amphenol, straight                                                                              |
| B220229      | Cable; 2-wire, 22 GA standard, additional footage                                                                         |
| Extra cable  | For cable assembly with added length, specify footage after standard part number (example: 15 feet = 4,5 m = B220-220-15) |

Table 52

## Cable and connector options

Used with magnetic pickup with preamplifier **B220210**

| Part number | Description                                                  |
|-------------|--------------------------------------------------------------|
| B220-219    | Cable assembly; 3 m with 3 pin connector                     |
| B220-217    | Cable assembly; 3 m with 3 pin and hub protector             |
| B222-127    | Connector assembly; 3 pin amphenol                           |
| B002203     | Cable; 3-wire 18 gauge, additional footage (priced per foot) |

Table 53

## Cable and connector options

Used with high temperature magnetic pickup **B220111**

| Part number | Description                                                       |
|-------------|-------------------------------------------------------------------|
| B220-090    | Cable assembly; 3 m high temp cable with 2 pin straight connector |
| B120-003    | Cable assembly; 3 m Teflon® with 90 °Connector                    |
| B220087     | Cable; high temp 2-wire Teflon®                                   |

Table 54

## Cable and connector options

Used with active pickups **B220-950 and B220-951**

| Part number | Description                                         |
|-------------|-----------------------------------------------------|
| B220952-6   | Cable assembly; 1,8 m with 5 pin straight connector |
| R220952-15  | Cable assembly; 4,5 m with 5 pin straight connector |

## Cable and connector options

Used with NEMA 6 pickups B161109 and B161210

| Part number | Description                                                                      |
|-------------|----------------------------------------------------------------------------------|
| B160206     | Cable assembly; 1,8 m with NEMA 6, 3 pin 90° connector for sanitary applications |
| B160212     | Cable assembly; 3,6 m with NEMA 6, 3 pin 90° connector for sanitary applications |
| B160220     | Cable assembly; 6 m with NEMA 6, 3 pin 90° connector for sanitary applications   |
| B160224     | Cable assembly; 7,3 m with NEMA 6, 3 pin 90° connector for sanitary applications |
| B160240     | Cable assembly; 12 m with NEMA 6, 3 pin 90° connector for sanitary applications  |
| B160250     | Cable assembly; 15 m with NEMA 6, 3 pin 90° connector for sanitary applications  |

Table 56

## Cable and connector options

Used with magnetic pickups B161211 and B170210

| Part number | Description                                                        |
|-------------|--------------------------------------------------------------------|
| B160512     | Cable assembly; 3,6 m with NEMA 6P, 5 pin 90° connector            |
| B160520     | Cable assembly; 6 m shielded with NEMA 6, 5 pin straight connector |

Table 57

## Bushing reducer

| Part number | Description                  |
|-------------|------------------------------|
| B220056     | 1" x ½" NPT bushing, plastic |
| B220057     | 1" x ½" NPT bushing, metal   |

Table 58

## Explosion proof kit (hazardous location)

| Part number | Description                                             |
|-------------|---------------------------------------------------------|
| B280-737    | For 1" NPT Hub for remote mount display B30X or B2800XP |
| B280-742    | For ½" NPT Hub for remote mount display B30X or B2800XP |

### Calibration Report

#### Unit Under Test (UUT) Information:

Description: 1" NPT, Turbine Flow Meter  
Model Number: B111-110  
Serial Number: 021501A112  
Sensor Type: Magnetic Pickup  
Output type: Frequency  
Minimum Flow: 5 GPM 18.9 LPM  
Maximum Flow: 50 GPM 189.3 LPM  
Calibration Date: January 6, 2015  
Calibration Interval: 12 Months  
Cal. Liquid: Water  
Ambient Temperature: 72.62 °F  
Ambient Humidity: 40.14 %RH  
Linear Points: 5

#### Master Meter:

Std uncertainty: ±0.25%  
Traceability No: TFM-1956 / TFM-1958  
Model No: Optiflux 4000 Mag Flowmeter  
Serial No: A0928610 / A0906248  
Re-Cal Date: 03.04.2015

#### Customer Information:

Customer Name: John Doe  
Customer PO: 25391932  
Order No: C2-050712

#### UUT Calibration Data Table In GPM:

| Flow Standard | Actual GPM | UUT Hz  | UUT Temp °F | Visc. cSt | UUT F/V Hz/cSt | UUT K CYC/GAL | (Hz*60)/NK GPM | Linear COEFF. | Raw Err % Rate |
|---------------|------------|---------|-------------|-----------|----------------|---------------|----------------|---------------|----------------|
| 2             | 50.07      | 733,800 | 68.60       | 0.995     | 737,654        | 879.33        | 50.05          | 1.0004        | 0.04           |
| 2             | 28.10      | 411,400 | 69.10       | 0.988     | 416,492        | 878.43        | 28.06          | 1.0014        | 0.14           |

### Calibration Report

#### Unit Under Test (UUT) Information:

Description: 2" Mid-Flow Gas Turbine Flow Meter  
Model Number: B142-20M  
Serial Number: 021701A900  
Sensor Type: Magnetic Pickup - Low Drag  
Output type: Frequency  
Minimum Flow: 14 ACFM  
Maximum Flow: 140 ACFM  
Calibration Date: January 6, 2017  
Calibration Interval: 12 Months  
Cal. Fluid: Air  
Ambient Temperature: 74.34 °F  
Ambient Humidity: 9.22 %RH  
Test Points: 5

## Customer accessibility and competence

We can help you in a timely manner to solve your measurement problems, advising you to assist in optimizing your measurement solution, technology and site location before you make a decision. An extensive distributor and service network ensures the best service worldwide.

Local representatives are a big advantage for our customers. The short distance and local language support provide efficient service. Our distributors are trained on Badger Meter products at their own facilities or in our training center. Our name assures you that our products have been manufactured with the best care and in conformity with all DIN ISO 9001:2015 directives.
