The unique Multi-Sensor Technology is a specialised and integrated circuit with two exceptionally light-sensitive high-resolution sensor arrays.

The Signal Guard uses electrical and optical filters to prevent interference signals from entering the system and causing measurement errors.

The high end optical system is a Bosch-developed platform consisting of high-quality lenses and prisms to optimise the laser signal.

Measuring accuracy and range are continuously tested during production and are certified in accordance with the international standard ISO 16331-1.
