## TRMS Digital Multimeters

3-349-454-03

8/4.14

- Digital Hand-Held Multimeters with RMS Measurement amongst other features including:  
 $V_{AC\ TRMS}$ ,  $V_{AC+DC\ TRMS}$ ,  $V_{DC}$ , Hz (V), Hz (A),  $\Omega$ ,  $V \rightarrow I$ ,  $^{\circ}C/^{\circ}F$  (TC)
- Resolution of 60,000 counts, can be changed to 6000 via the menu, display illumination can be activated for difficult lighting conditions

### METRAHIT EBASE

- Current measurement via clamp current sensors:  
 The transformation factor is adjustable from 1 mV:1 mA to 1 mV:1 A and the factor is calculated for the display.

### METRAHIT ETECH

- Direct Current measurement with increased accuracy and Current measurement, via clamp current transformer and sensors
- Broad range capacitance measurement

### METRAHIT EXTRA/ETECH/ESPECIAL

- Special low-impedance alternating voltage measurement (1 M $\Omega$ )
- 1 kHz / -3 dB low-pass filter can be activated

### METRAHIT EXTRA

- Direct current measurement from 10 nA to 10 A, 16 A for short periods
- Temperature measurement with Pt100/Pt1000 resistance thermometer
- Broad range capacitance measurement
- TRMS AC and AC + DC bandwidth 100 kHz

### METRAHIT ESPECIAL

- Special instrument for the performance of measurements at current transformer circuits

**CAT IV**

German Accreditation Body  
 D-K-15080-01-01  
 DAKKS Calibration Certificate included

## Applications

The instruments of the E- and high resolution series are extremely rugged, reliable digital multimeters with housings made of impact resistant ABS.

With a resolution of 60,000 counts and up to 26 different measuring functions, they've been developed for professional use.

## Features

### Three Connector Jacks with Automatic Blocking Sockets (ABS) \*

All current ranges are implemented via a single connector jack which prevents any possibility of operator error. Auto-ranging is available in all current measuring ranges.

Also the automatic blocking sockets prevent incorrect connection of the measurement cables, as well as selection of the wrong measured values. Danger to the user, the instrument and the device under test resulting from operator error is eliminated.

\* Patented (patent no. DE 10 2005 062 624, US 7,439,725)

### Overload Protection

The instrument is safeguarded for up to 1000 V in all measuring functions by overload protection. Voltages of greater than 1000 V and current of greater than 10 or 16 A are indicated acoustically. Dangerous contact voltages are indicated when the 1 kHz low-pass filter is activated.

The FUSE display appears at **METRAHIT EXTRA** and **METRAHIT ETECH**

### RMS Value with Distorted Waveshape

The utilized measuring method allows a waveshape independent RMS measurement (TRMS AC and AC+DC) for voltage and current (**METRAHIT EXTRA** up to 100 kHz).

### Selectable Filter for V AC Measurement

A 1 kHz low-pass filter can be selected if required, for example to measure the motor voltage at electronic frequency converters. The input signal is checked by a voltage comparator for dangerous voltages as long as the low-pass filter is activated. A high-voltage symbol appears at the display if dangerous voltage is present.

### Measuring 5 V Square-Wave Signals with the METRAHIT EXTRA

This function allows to test circuits and transmission cables by measuring the frequency and the duty cycle of pulses with amplitudes of 2 to 5 V and frequencies of 100 Hz to 1 MHz.

### Analog Scale for Quick Trend Display – Bar Graph or Pointer

The analog scale (with additional negative range for zero-frequency quantities) allows for faster recognition of measured value fluctuation than is possible with a digital display. The instrument can be switched back and forth between bar graph and pointer display via the menu.

### Automatic or Manual Measuring Range Selection

Measurement functions are selected by a rotary dial and a function key. The measurement range selection is done automatically according to the input signal. Manual measurement range selection is possible via function key.

## TRMS Digital Multimeters

### Measurement with current clamps and sensors

Current clamps and sensors are used for current measurements without interrupting the circuit under test and for high currents above 16 Amps. All E series multimeters offer convenient measurement with current clamps.

The measured current value is automatically calculated for the user with the help of the adjustable clamp factor.

### Fast Acoustic Continuity Test

Testing for short circuit connection and circuit interruption is possible with the selector switch in the  $\square$  position. The threshold value for acoustic response can be set to 1, 10, 20 ... 500  $\Omega$  in 10 Ohm steps.

### Automatic Storage of Measured Values \*

The DATA function automatically saves the digitally displayed measured value after stabilisation in. Acoustic signaling is also used to indicate whether the new measured value deviates from the initial reference value by less or more than 0.1% of the measuring range.

\* Patented

### Min-Max Data Storage

Comparable to the slave-pointer function of an analog instrument, the device saves the highest and lowest measured values after the MIN/MAX function has been activated or reset. These extreme values can be queried at the display.

### Battery Charging Status – Power Saving Circuit

The battery charging status is indicated by means of four symbols.

The device is switched off automatically if the measured value remains unchanged for a period of between 10 and 59 minutes (adjustable), and if none of the controls are activated during this time. Automatic shutdown can be deactivated by switching the instrument to continuous operation.

The standby mode of the infrared interface can be switched off.

### Protective Rubber Holster for Rugged Conditions

The instrument is protected against damage in the event of impacts or dropping by means of a soft rubber holster with tilt stand and test probe holder. The rubber material also assures that the instrument does not slide if it is set up on a vibrating surface.

### Infrared Data Interface

The device can be remotely configured, and momentary and stored measurement data can be read out via the bidirectional infrared interface. The USB X-TRA interface adapter and METRAWin10 software are required (see accessories). Interface protocol and device driver software for LabVIEW® (National Instruments™) are available upon request.

### DAkKS Calibration Certificate

Each multimeter is individually adjusted, subjected to final inspection and calibrated. Adherence to the specification is confirmed by means of the included DAkKS calibration certificate, which is valid worldwide (recognized by EA and ILAC. If any type of DMM is due to recalibration (recommended intervals: 1 to 3 years) the multimeters can inexpensively be recalibrated at the factory or at any calibration laboratory.

### Applicable Regulations and Standards

<sup>1)</sup> Alternating voltage measurement with specially reduced input impedance

<sup>2)</sup> 16 Mbit = 2048 kByte = 61,600 measured values, sampling rate adjustable from 0.1 seconds to 9 hours

<sup>3)</sup> IP 65 available with the METRAHIT OUTDOOR model

### Included

- multimeter in HC20 hard case
- pair of safety measurement cables (1.5 m) with 4 mm test probes, 1000 V CAT III, 600 V CAT IV (KS17-2)
- batteries, 1.5 V, type AA
- condensed operating instructions, English/German
- CD ROM, content: operating instructions in English and German
- DAkKS calibration certificate
- protective rubber holster

- 1) Specified accuracy is valid as of 3% of the measuring range.  
With short-circuited test probes: residual value of 1 to 30 d at zero point due to the TRMS converter (exception: mV AC range, 60 counts). See frequency influence on page 4.
- 2) At 0 ° ... + 40 °C
- 3) Displays up to max. 6.0 V, "OL" in excess of 6.0 V.
- 4) Applies to measurements at film capacitors and battery operated
- 5) Lowest measurable frequency for sinusoidal measuring signals symmetrical to the zero point
- 6) Overload capacity of the voltage measurement input:

- 7) Overload capacity of the current measurement input:  
See current measuring ranges for maximum current values.
- 8) Input sensitivity, sinusoidal signal, 10% to 100% of the measuring range
- 9) Plus sensor deviation
- 10) Off-time > 30 min and  $T_A \leq 40 \text{ }^\circ\text{C}$   
\*) without ZERO max.  $\pm 15$  digit

### Data Interface

Type Optical via infrared light through the housing  
 Data transmission Serial, bidirectional (not IrDa compatible)  
 Protocol Device specific  
 Baud rate 38,400 baud  
 Functions

- Select/query measuring functions and parameters
- Query momentary measurement data
- Read out stored measurement data

The USB X-TRA plug-in interface adapter (see accessories) is used for connection to the PC's USB port.

### Internal Measured Value Storage (METRAHIT EXTRA only)

Memory capacity 16 MBit (2 MByte) for approx. 61,000 measured values with date and time stamp

## TRMS Digital Multimeters

### Accessories for Operation at a PC

#### Interface Adapter for USB Connection

The following functions can be executed with the USB X-TRA bidirectional interface adapter:

- Configure the **METRAHIT** Multimeter from a PC.
- Transmit live measurement data to the PC.
- Read out data from memory at the **METRAHIT EXTRA**.

The adapter does not require a separate power supply. Its baud rate is 38,400 baud. A CD ROM is included which contains current drivers for Windows operating systems.

### METRAWin®10/METRAHit® Software

METRAWin®10/METRAHit® PC software is a multilingual, measurement data logging program for recording, visualizing and documenting measured values of multimeters of the **METRAHIT** e-series.

Communication between the PC and the measuring instrument(s) is established via available interface adapters.

Depending upon device type, one or several of the following operating modes are possible:

- **Device Configuration**  
Remote configuration and querying of device-specific functions and parameters, for example measuring function, measuring range and memory parameters. Frequently used device settings can be saved to configuration files for easy recall.
- **Online Recording of Measurement Data**  
Read-in, display and recording of momentarily measured data from the interconnected device.
  - Number of measuring channels up to 10
  - Start recording manual, triggered by measured value, time triggered
  - Recording mode
    - > time controlled with sampling interval of 0.05 s\* ... 1 s ... 60 min
    - > manually controlled
    - > measured value controlled in event of exceeded limit/delta value
  - Recording duration max. 10 million intervals

\* Depending upon device type, measuring function, number of measuring channels and communication (e.g. via modem), sample intervals of less than 1 s cannot be used.

- **Reading Out and Visualizing Stored Data**  
If supported by the device: read-in and display of offline data recorded to device memory.

For purposes of analysis, data recorded online or read in from the device's memory can be displayed in various formats:

#### Y(t)-recorder display for up to 6 channels

#### XY-recorder display for up to 4 channels

#### Multimeter-display for up to 4 channels

#### Tabular display for up to 10 channels

### System Requirements

METRAWin 10 (as from version 6.0) can be run on IBM compatible PCs with Microsoft Windows® VISTA, 7 and 8.
