- ✓ Teflon® Coated Stainless Steel Rod or Rope

The MLR radar level meters are compact level measurement device that include a transmitter that emits microwave pulses along a rod or wire rope electrode. The pulse propagates along the electrode in the form of electromagnetic wave toward the level surface, where it is reflected and the signal wave component is returned to the receiving module of the electronic housing. The on-board circuitry measures the time of flight of electromagnetic wave and the distance to the surface level is calculated.

According to the level height, the level meter output is set and the measured value is shown on the display. Radar level meters are resistant against changes in the atmosphere (pressure, temperature, dust, steam) and to changes in medium parameters (change in dielectric constant and conductivity).

### Variants of Sensors

- MLR -70 -12 Fully coated stainless steel rod electrode FEP (Teflon®) for level measurement of aggressive liquids. Maximum electrode length 2 m
- MLR -70 -32 Fully coated stainless steel rope electrode FEP (Teflon®) coated for level measurement of aggressive liquids and very pure liquids. Maximum electrode length 12 m

### **Guided Wave Radar Level Transmitter**

| Supply voltage MLR-70N  | 18 36VDC  |

| <b>Device Surface Temperature for</b> |   |
|---------------------------------------|---|
| Performance xd(xdt) category 1        | d |

| level meter                      | Device Surface<br>Temperature  |  |  |
|----------------------------------|--|--|--|
| electrode<br>MLR-70I<br>MLR-70M  | medium temp. tm +5°C<br>medium temp. tm +10°C  |  |  |
| housing, electronic part MLR-70I | temperature tp +15°C<br>temperature ta +15°C<br>temperature tp +30°C<br>temperature ta +30°C |  |  |

The maximum allowable temperature of the medium, process connection and ambient temperature depends in MLR-70Xi (XiT) at the desired temperature class (see table). Maximum temperatures for the performance Xi (XiT) category ½G and tab.). The temperature value can not be exceeded as the hot surface of the device could cause ignition of an explosive or flammable atmosphere.

#### Installation

Install the level meter into the upper lid of the tank or reservoir using a welding flange or threaded nut.

The min. distance to install the level meter into a lid or a ceiling of a tank from the metal tank wall is 300 mm and from the non-metal tank wall is 500 mm (except MLR-70\_-20).

If installed in an open channel (sumps, reservoirs, etc.) install the level meter as close as you can to the maximum level expected.

The rope electrode type must be untangled prior to being inserted into the tank.

If visible defects are discovered, please contact the manufacturer of reseller immediately.

#### Installation

We recommend to keep the specified distances from the tank wall.

In case where the electrodes comes in contact with the bottom of the tank it is necessary that the electrode is attached to the tank bottom (the connection may be conductive or non-conductive)

type of wall (without ref. tube) (with ref. tube) metal ≥ 300 mm any distance E = m + t + kE = m + t + znon-metal ≥ 500 mm any distance Ε E - The length of rope electrode t - Measuring range m – Dead zone on the beginning of electrode k - Dead zone on the end of electrode ш z - The length of weight (110 mm) d - The distance from the tank wall (see Table) اك Valid for: all type

For correct measurement it is important to avoid installation in the high extended type tank connections

a ≤ b

 $b \ge 50 \text{ mm}$ 

a - Neck height

b - Neck width

If you can not eliminate all interference, which could affect the measurement of level, it is recommended to use the procedure "TEACHING" (see Instruction manual). This procedure sets the level meter to a mode, which suppresses false reflections

Valid for: all types except MLR-70 -20

### **Order Code**

# **Dimensional Drawing** MLR-70 -32 MLR-70\_-10(11,12) Ø 70 PG11 62 97 24 OK 46 24 G1" E2000 - 10 : E300... E8000 - 11(12) : E300 E2 Ø 6 Ø8(10) E12000 var. Ø 29

#### Installation

Standard - included in the price of the level meter

• 1 pc. seal

#### Optional -

- · Stainless steel nuts NPT | G
- Steel or Stainless steel welding flange
- Other seals (PTFE | AI)

### Safety | Protection | Explosion **Proof**

The level meter MLR-70 is equipped with protection against reverse polarity and output current overload. Protection against dangerous contact is secured by low safety voltage that complies with EN 33 2000-4-41. Electromagnetic compatibility according to EN 55022/B, EN 61326/Z1 and EN 61000-4-2 to 6.

The explosion proof of MLR-70Xi (XiT) is ensured by compliance with the following standards: EN 60079-0: 2007; EN 60079-11: 2007 and BS EN 60079-26: 2007. Explosion proof of MLR-70Xi (XiT) is proven by FTZÚ-AO 210 Ostrava-Radvanice: certificate No: FTZÚ 13 ATEX

### Special conditions for safe use of variant MLR-70Xi

Level meters MLR-70Xi (XiT) are designed for connection to intrinsically safe circuits with galvanic isolation. If you use the device without galvanic isolation (Zener barriers) it is necessary to offset a potential between the sensor and the grounding point of the barriers.
