Introduction

Thank you for purchasing a True Echo™ series PRX Explosion Proof Pulse Radar Level Transmitter from APG. We appreciate your business! Please take a few minutes to familiarize yourself with your True Echo™ Radar Level Transmitter and this manual.

True Echo™ series PRX Explosion Proof Pulse Radar Level Transmitters bring the unassailably accurate level readings of radar sensors to Class I, II, and III hazardous locations. The True Echo™ PRX automatically adjusts signal power for optimal accuracy and clarity, with echo masking and damping factors programmable via software. With a low dielectric requirement for target materials, and radar's reliable accuracy in environments with foam, vapors, or dust, the easy to install True Echo™ PRX makes getting dependable level readings in hazardous areas simple. True Echo™ PRX sensors are field calibratable and fully programmable via RS-232, RS-485 Modbus, or HART communications.

Reading your label

Every APG instrument comes with a label that includes the instrument's model number, part number, serial number, and a wiring pinout table. Please ensure that the part number and pinout table on your label match your order.

FCC Information

This equipment has been tested and found to comply with limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

i IMPORTANT: Changes or Modifications not expressly approved by factory could void the user's authority to operate the equipment.

Electrical ratings

FM Approval

Rated 12 - 30 VDC supply, 4-20 mA output, RS-232, RS-485, or HART communication

Explosion Proof

Class I, Division 1, Groups A, B, C, and D; Temperature Class T6 Ta = 60° C.

Dust-Ignition Proof

Class II/III, Division 1, Groups E, F, and G; Temperature Class T6 Ta = 60° C.

Hazardous (Classified) Locations, indoor/outdoor (Type 6, IP68)

Chapter 1: Specifications and Options

- Dimensions

• Specifications

Performance

Operating Range	0 - 17 ft. / 0 - 5 m 0 - 50 ft. / 0 - 15 m 0 - 100 ft. / 0 - 30 m
Transducer Frequency	6.3 MHz
Target Dielectric Constant	$\epsilon_r > 2$
Beam Spread	Teflon Antenna: 6° from center 316L SS Horn: 3° from center

Accuracy

Accuracy	±0.25% of maximum range
Resolution	6.1 μ A

Environmental

Housing Operating Temperature	-40 to 140°F (-40 to 60°C)
Process/Probe Temperature	
Standard Temperature	-40 to 176°F (-40 to 80°C)
High Temperature	-40 to 350°F (-40 to 177°C)
Extreme Temperature	-40 to 572°F (-40 to 300°C)
Maximum Process Pressures	
Standard Temp/Pressure	5 bar (72.5 psi)
Standard Temp/High Pressure	70 bar (1015.3 psi)
High/Extreme Temps	2 bar (29 psi)
Housing Enclosure Rating	NEMA 6 / IP 68

Electrical

Supply Voltage	12-30 VDC / 20-35 VDC (HART)
Current Draw	70 mA max, 1.68 W @ 24 VDC

Materials of Construction

Housing	Aluminum, 316L Stainless Steel
Antenna	Teflon, 316L Stainless Steel Horn

Mounting

Teflon Antenna	1.5" or 2" NPT
Sanitary Teflon Antenna	1.5" or 2" Sanitary Tri-Clamp
316L SS 6" Ø Horn	3" NPT
316L SS 13" Ø Horn	13" Ø Flange

Communication

Output	4-20 mA (shared common); HART
Calibration & Diagnostics	RS-232, RS-485 Modbus, HART

• Model Number Configurators

Model Number: PRX - - - - - - -
 A B C D E F G

A. Range

- ☐ **017** 17 ft (5m)
- ☐ **050** 50 ft (15m)
- ☐ **100** 100 ft (30m)

B. Supply Voltage, Signal

- ☐ **V024**[▲] 12-30 VDC - 3 wire, 4-20 mA w/ shared common
- ☐ **V20L** 20-35 VDC - 2 wire HART†

C. PC Communications (Calibrate/Diagnos)

- ☐ **C2** RS-232
- ☐ **C4**[▲] RS-485
- ☐ **CH** HART†

D. Housing Material

- ☐ **AL**[▲] Aluminum
- ☐ **SS** 316 Stainless Steel

▲ This option is standard

Note: † CH HART PC Communications requires V20L 20-35 VDC Supply Voltage

E. Antenna Material

- ☐ **TE**[▲] Teflon Rod
- ☐ **S6** 316L Stainless Steel 6" Ø Horn†
- ☐ **HS** High Temperature Radar, 316L SS Horn†
- ☐ **HT** High Temperature Radar, Teflon Ant.
- ☐ **PT** High Pressure Teflon Ant.(≤ 70 bar)††

F. Mounting

- ☐ **T15** 1.5 in. NPT
- ☐ **T2**[▲] 2 in. NPT
- ☐ **T3** 3 in. NPT
- ☐ **BF** 13 in. Ø 316L SS Bottom Flange (S6, HS only)

G. Firmware

- ☐ **S** Standard
- ☐ **F** Fast Firmware

Note: † S6 and HS 316L SS horns require T3 3 in. NPT mount.

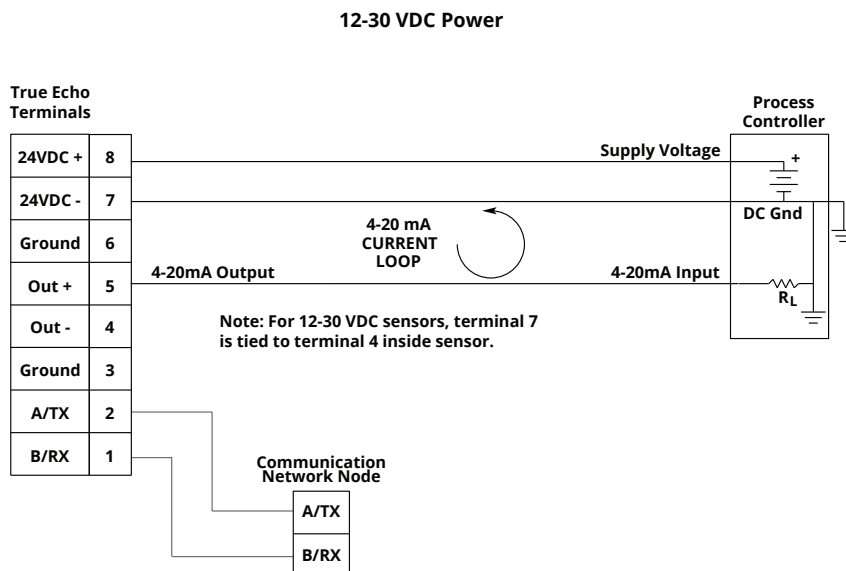

Note: †† PT High PPressure Teflon Rod requires T2 2 in. NPT mount

• Electrical Terminals and System Wiring Diagrams

Terminals

Power & Control Wiring For 12-30 VDC Supply

Recommended Wiring:

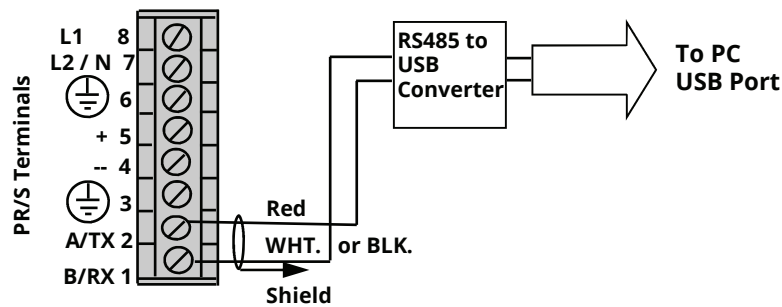

- Power & Signal - 3 Conductor, Shielded, 24 AWG, 300V.
- Communication - 1 Shielded Twisted Pair, 24 AWG, 300V.

NOTE: For RS-232 or RS-485 direct to PC wiring, see Communication Connection Diagrams.

Communication Connection Diagrams for RS-232 and RS-485/Modbus

RS-232 Serial Connection to PC

RS-485/Modbus Connection to PC

i IMPORTANT: Shield wire for RS-485/Modbus must only be connected on one end. If connecting at radar terminals, use terminal 3.

Chapter 2: Installation and Removal Procedures and Notes

• Tools Needed

- You should not need any tools to install your True Echo™ series Radar Level Transmitter. If you are using a stand pipe to mount your radar, you will probably need tools to install the stand pipe.

• Installation Notes

- Mount your True Echo™ series radar so that it has a clear, perpendicular path to the surface being monitored. Your sensor should be mounted away from tank or vessel inlets. Do not mount radar in center of domed tank. (See Figure 2.1)
- The radar path should be free from obstructions and as open as possible for the 4° off axis beam pattern.

Figure 2.1

• Mounting Instructions

Mounting your radar level transmitter is easy if you follow a few simple steps:

- Never over-tighten the sensor.
- Always screw in your sensor by hand to avoid cross-threading. Thread failure can be a problem if you damage threads by over-tightening them or by crossing threads.

i IMPORTANT: Do not over tighten! The sensor should be threaded in only hand tight.

 **NOTE:** Do not mount the sensor where the beam will intersect objects such as fill streams, pipes, ladder rungs, wall seams, or corrugated tank walls.

- **Electrical Installation**

- Unscrew top lid of radar, exposing electrical terminals.
- Feed wires from your control system through 1/2" NPT conduit hole on side of radar.
- Attach the wires of your control system to the radar according to the Power & Control Wiring Diagram on page 4.
- Secure conduit in 1/2" NPT hole.
- Replace lid of radar.

- **Software Installation**

- Open the zip file.
- Choose "Install" from the options at the top of the zip file window.
- The installation process will prompt you as needed to complete the installation.

- **Removal Instructions**

- Ensure that power (VDC, control power, and communication power) to the radar is off.
- Unscrew top lid and detach wires from terminals.
- Disconnect conduit from radar.
- Remove the radar and store it in a dry place, at a temperature between -40° F and 140° F.
- If the radar was installed in a hazardous location, ensure that the cables will not energize while the sensor is disconnected.

 **DANGER:** Do not disconnect equipment installed in hazardous locations unless power has been switched off or area is known to be non-hazardous.

Chapter 3: Maintenance

• General Care

Your True Echo™ Radar Level Transmitter is very low maintenance and will need little care as long as it was installed correctly. However, in general, you should:

- Avoid applications for which the sensor was not designed. Follow all temperature range restrictions, and avoid contact with incompatible corrosive chemicals and fumes, or other damaging environments.
- Inspect the threads whenever you remove the sensor from duty or change its location.

• Low Dielectric Material Setting

Your True Echo™ Pulse Radar Level Transmitter has a setting to more accurately measure target materials with low dielectrics ($\epsilon < 4$). The Low Dielectric Materials mode can be turned on or off via the Calibration Switch on the radar.

- Unscrew the lid of the radar.
 - Blinking Green Status LED (see Terminals on Page 4) indicates Low Dielectric Materials mode is ON.
 - Solid Green Status LED indicates Low Dielectric Materials mode is OFF.
- To toggle the Low Dielectric Materials mode, press and hold the Calibration Switch button until the Status LED cycles from Yellow to Red and then off (see Terminals on page 4).
- Replace lid of radar when finished.

• Field Calibration

All True Echo™ Pulse Radar Level Transmitters can be calibrated in the field to set minimum or maximum material levels for 4 mA or 20 mA output.

For Full/Maximum Level Calibration

- Turn Low Dielectric Materials mode OFF (see instructions above).
- With target material at maximum desired level, press and hold Calibration Switch button.
 - For 20 mA output, release button when Status LED turns Yellow.
 - For 4 mA output, release button when Status LED turns RED.
- Status LED will flash after release to confirm setting.

For Empty/Minimum Level Calibration

- Turn Low Dielectric Materials mode OFF (see instructions above).
- With target material at minimum desired level, press and hold Calibration Switch button.
 - For 20 mA output, release button when Status LED turns Yellow.
 - For 4 mA output, release button when Status LED turns RED.
- Status LED will flash after release to confirm setting.

i IMPORTANT: Low Dielectric Material mode must be OFF before performing level/output calibration. To calibrate for low dielectric materials, do not turn on Low Dielectric Material Mode until AFTER performing level/output calibration.

Repair and Returns

Should your True Echo™ Pulse Radar Level Transmitter require service, please contact the factory via phone, email, or online chat. We will issue you a Return Material Authorization (RMA) number with instructions.
