

SGD 28-M420

Current Loop Indicator

PanelPilot Compatible

Smart Graphics Display

FEATURES

- 2.8" colour TFT screen
- Use PanelPilot software, to setup and customise the display. Compatible with Windows XP, Vista and Windows 7.
- Multiple configurations included free
- Programmable via the USB interface
- Simple panel mounting solution
- Operating voltage of 4V-30V d.c. (see **note**)
- Measures 4 - 20mA current loop (also 10-50mA or 0-50mA possible)
- Digital hold

The SGD 28-M is a PanelPilot Compatible graphics display with a 320 x 240 pixel (QVGA) colour display and USB programming interface.

Using the PanelPilot software (available for Windows XP, Vista and Windows 7), users are able to choose from an ever-increasing number of configurations (six voltmeters at launch) which can then be customised to their needs.

Colours, text labels, splash screen and input scaling can all be customised by the user through the software and then uploaded to the SGD 28-M through the USB connection.

Panel or enclosure installation of the display is simple, using a panel fixing clip to mount the display, and 4 screw terminals to connect the inputs.

Note: Requires fully floating PSU with respect to current loop

SPECIFICATIONS

	Minimum	Typical	Maximum	Unit
Accuracy		0.05	0.1	%
Linearity			±1*	Count
Sample rate		3		Samples / second
Operating temperature range	0 (+32)		+40 (+104)	°C (°F)
Supply voltage	4		30	V d.c.
Supply current **	35		190	mA
Measurement range	0	4-20	50	mA
Loop volt drop	0	0.4-2.0	5.0	V

* Depending on user calibration settings

** Voltage dependent. See graph on Page 2.

ORDERING INFORMATION

Standard Display (Panel meter, fixing kit, quick start guide)	SGD 28-M420
---	-------------

USB Cable (Type A to mini-B)	CABLE USB A-MF
---------------------------------	----------------

USB Power Supply UK Plug	PSU-5VDC-USB-UK
-----------------------------	-----------------

USB Power Supply USA Plug	PSU-5VDC-USB-USA
------------------------------	------------------

HARDWARE

Screw Terminal Functions

- | | | |
|---|----|---|
| 1 | NC | Do not connect |
| 2 | I+ | Positive connection from current loop |
| 3 | I- | Negative connection to current loop, and 0V power supply return |
| 4 | V+ | Positive power supply connection (4V – 30V d.c.) |

Typical Supply Current

USB connection

A 'Type A to Mini-B' USB cable is required to program and customise the SGD 28-M. It typically takes 10 seconds to send a configuration, with an additional 5 seconds needed for the hardware to reset.

The SGD 28-M can be powered directly from USB and is compatible with both USB 1.1 and USB 2.0. The screw terminals and advanced connector can remain connected whilst using USB, but it is not necessary for V+ to be powered.

A USB power supply is available - PSU-5VDC-USB-UK (UK plug format) or PSU-5VDC-USB-USA (USA plug format). This may be used as a convenient means to provide a fully floating power supply for the loop indicator.

Display

The display is a 2.8" TFT panel, with a resolution of 320 x 240 pixels and a 16-bit color depth. Any graphics that are uploaded to the meter are automatically converted to this specification. A resistive touchscreen is fitted, for use with supporting applications. Clean the screen with a damp, soft, lint free cloth.

Panel Mounting

The SGD 28-M can be fitted into panels 1mm - 3mm deep.

A silicone seal is included to improve fitting on thin panels. The minimum panel thickness is increased to 2mm if the seal is not fitted. Panel cut-out is 87mm x 54.5mm.

NOTE: The display is NOT protected against moisture or dust.

PanelPilot Compatible Smart Graphics Display

All dimensions in mm (inches)

Current Loop Indicator

PanelPilot Compatible Smart Graphics Display

VARIOUS OPERATING MODES

MEASURING 4-20mA

Power supply to meter must be fully floating
(isolated from the 4-20mA current loop)

USING TWO SGD DISPLAYS IN SAME INSTALLATION

Each SGD must be powered from a separate,
fully floating, power supply

MEASURING 4-20mA
USING A USB POWER SUPPLY

DIGITAL HOLD

DIGI1 will hold the display

ALARM OUTPUT

Applications that feature an alarm can be connected as above.
ALM1 must not sink more than 10mA maximum each. If supply
voltage varies, use an appropriate voltage regulator.

$$R = \frac{(V_S - V_L)}{I_L}$$

V_S = Supply voltage
 V_L = LED Voltage drop
 I_L = LED current

CURRENT LOOP

Internally the SGD 28-M420 uses a Programmable Gain Amplifier (PGA) to make the best use of available resolution (theoretically there are eight different ranges available to the SGD. However for the 4-20mA application, this is effectively restricted to the 0-2.5 range.

Voltage Range (V)	Resolution (mV)
0 - 1.25	0.3
0 - 2.5	0.6 (4-20mA)
0 - 4	1.0
0 - 5	1.2
0 - 8	2.0
0 - 10	2.4
0 - 20	4.9
0 - 40	9.8

The input voltage range is decided using the two voltages that the user enters in the scaling section of the Panel Pilot software. The software uses the smallest range available, which can accommodate both of the voltages entered by the user.

Note: I+ and I- share a common ground (i.e. not floating or isolated from each other).

ADVANCED CONNECTOR

The DIL IDC socket provides an alternative connection method to the screw-terminals (V+, OV, IN1 and IN2 are duplicated). It also includes provision for future expansion using data buses (SPI and I2C) and alarm outputs. Some expansion options may require an additional interface board - Visit www.panelpilot.com for information on which features are currently supported.
